Subject Index of Volumes 92–93

7075 aluminium alloy
retrogression and re-ageing of 7075 aluminium alloy: microstructural characterization, 54

AA5383
the development of the welding procedures and fatigue of butt-welded structures of aluminium-AA5383, 60
Active metal brazing
the effect of brazing temperature on the titanium/glass-ceramic bonding, 102
Adhesion
atomistic modelling of interfacial bonding at metal/polymer interface, 147
mechanical characterisation of TiN/ZrN multi-layered coatings, 177
the effect of the addition of Al and Si on the physical and mechanical properties of titanium nitride, 169
the influence of ductile interlayers on the mechanical performance of tungsten nitride coatings, 156
Adiabatic shear bands (ASBs)
high strain rate effects on the strain of alloy steels, 481
Adjacent fastener holes
elasto-plastic finite-element analysis of the cold expansion of adjacent fastener holes, 424
Aerospace
elasto-plastic finite-element analysis of the cold expansion of adjacent fastener holes, 424
Al_2O_3
the role of Al_2O_3 impurities on the microstructure and properties of Y-TZP, 85
Aluminium
the recycling of metals by plastic deformation: an example of recycling of aluminium and its alloys chips, 35
Aluminium alloy
the reasons for structural defects arising in forgings of aluminium alloys analysed using the finite element method, 50
Aluminium-alloys
the recycling of metals by plastic deformation: an example of recycling of aluminium and its alloys chips, 35
Aluminum
wear behaviour of aluminum reinforced with nickel aluminide MMCs, 66
Amorphous alloys
preparation of Fe–Zr–B amorphous alloys by chemical reduction, 525
Amorphous phases
characterization of mechanically alloyed Fe–Cr–Sn alloys, 395
Anharmonic effects
temperature dependence of the first order Raman scattering in thin films of μc-Si:H, 235
Anisotropy
numerical determination of forming limit diagrams of orthotropic sheets using the '3G' theory of plasticity, 419
Annealing
changes in porosity and young's modulus due to sintering of plasma sprayed thermal barrier coatings, 217
Anode substrate
properties of Ni/YSZ porous cermets for SOFC anode substrates prepared by tape casting and coat-mix™ process, 107
APES
microstructural and wettability study of surface pretreated glass fibres, 129
Arc sawing (AS)
arc sawing of nickel based superalloys in aqueous electrolytes, 274
Artificial neural networks
cutting force modeling using artificial neural networks, 344
Atomistic modelling
atomistic modelling of interfacial bonding at metal/polymer interface, 147
Axial fatigue
the development of the welding procedures and fatigue of butt-welded structures of aluminium-AA5383, 60

Beam deflection
thermal diffusivity measurements of vapour grown carbon fibre composites, using the optical beam deflection technique, 151
Binder rheology
a comparison of paste rheology and extrudate strength with respect to binder formulation and forming technique, 141
Biocompatibility
properties of the surface layers on titanium alloy and their biocompatibility in in vitro tests, 190
Blank-holder force
on the deep drawing of cups with punch and blank-holding forces proportional to a hydraulic pressure, 375
Bone
temperature effects in the drilling of human and bovine bone, 302
Bore-expanding
prediction of forming limit in bore-expanding of sheet metals using ductile fracture criterion, 433
Borohydride reduction
preparation of Fe–Zr–B amorphous alloys by chemical reduction, 525
Bottle filling
controlling of overfilling in food processing, 360
Brittle coating
failure probability analysis for a RBSN cylinder with a SiC coating subjected to a radial heat flux, 388
Brittle materials
application of Weibull statistics to the failure of coatings, 257
Bulge forming
finite element simulation of bulge forming of an elbow of box section from circular tube, 410
Bulk forming
inertia effects on the prediction of ductile damage, 474

Elsevier Science S.A.
PII: S0924-0136(99)00383-0

Carbide
tool wear characteristics in turning of titanium alloy Ti-6246, 329
Carbothermal reduction
carbothermal reduction and nitridation of silica: nuclei planar growth controlled by silicon monoxide diffusion on the reducer surface, 112
Cast deformation complex
new industrial technology for producing mill balls in a continuous-casting deformation complex, 316
Cast iron
evaluation of the heat of solidification of cast irons from continuous cooling curves, 25
Ceramic coatings
analysis of residual stresses in thermal barrier coatings, 209
Ceramic injection moulding
a comparison of paste rheology and extrudate strength with respect to binder formulation and forming technique, 141
Ceramic
processing and properties of nanophase ceramics, 77
the role of Al_2O_3 impurities on the microstructure and properties of Y-TZP, 85
numerical simulation of failure prediction for ceramic tools: comparison with forging test results, 502
optimization of the sintering process of raw material wastes, 97
Ceramic–glass
the effect of brazing temperature on the titanium/glass-ceramic bonding, 102
Cermet
properties of Ni/YSZ porous cermets for SOFC anode substrates prepared by tape casting and coat-mix® process, 107
CFRP composite
machining optimisation in carbon fibre reinforced composite materials, 135
Characterisation
solidification process and characterisation of a mass–gravity foundry ingot, 71
Chemical composition
the modelling of hardenability using neural networks, 8
Chips
the recycling of metals by plastic deformation: an example of recycling of aluminium and its alloys chips, 35
Chromium nitride
influence of knife-surfaces modification with hard coatings on the peeling wood process, 264
Closed-die forging
new industrial technology for producing mill balls in a continuous-casting deformation complex, 316
Coarse grain structure
the reasons for structural defects arising in forgings of aluminium alloys analysed using the finite element method, 50
Coating
hard chromium plating of EDT mill work rolls, 281
the influence of small additions of Ni, Ti and C on the oxidation behaviour of sputtered tungsten coatings, 162
Cold expansion
elasto-plastic finite-element analysis of the cold expansion of adjacent fastener holes, 424
Cold forming
dimensional accuracy and cost optimisation in the finish machining of cold formed parts, 335
Composites processing
metal matrix composites: production by the stir casting method, 1
Composites
high-speed steels: increasing wear resistance by adding ceramic particles, 15
metal matrix composites: production by the stir casting method, 1
the recycling of metals by plastic deformation: an example of recycling of aluminium and its alloys chips, 35
thermal diffusivity measurements of vapour grown carbon fibre composites, using the optical beam deflection technique, 151
Computer simulation
the thermal–mechanical and microstructural model for the FEM simulation of hot plate rolling, 463
Contact angle
mechanics of wetting systems of natural fibres with polymeric resin, 124
Control charts
the use and misuse of statistical tools, 288
Control
controlling of overfilling in food processing, 360
Cooling curves
evaluation of the heat of solidification of cast irons from continuous cooling curves, 25
Corrosion protection
protection of NdFeB magnets by ultra-thin sol–gel derived films, 518
Critical loads
the effect of the addition of Al and Si on the physical and mechanical properties of titanium nitride, 169
Cross wedge rolling
numerical simulation of the cross wedge rolling process including upsetting, 468
study of the process stability of cross wedge rolling, 458
Cup drawing
on the deep drawing of cups with punch and blank-holding forces proportional to a hydraulic pressure, 375
Cutting force
cutting force modeling using artificial neural networks, 344
Cutting material
interaction of the technological history of a workpiece material and the machining parameters on the desired quality of the surface roughness of a product, 381
Cutting test
strengthening of hardmetal inserts for cutting tools through heat treatment and surface modifications (PVD, CVD coatings), 355
Cutting tool
a DC motor based cutting tool condition monitoring system, 350

Database
an applied database system for the optimization of cutting conditions and tool selection, 371
DC motor
a DC motor based cutting tool condition monitoring system, 350
Deformation
simulation of deformation and temperature in multi-pass three-roll rolling, 450
Diesel engine
directions of the development of thermal barrier coatings in energy applications, 195
Differential thermal analysis (DTA)
relationship between the DTA peak and the phase diagram: symbiosis between a thermodynamic database and a DTA curve, 31
Diffuse instability
pole instability theory for ellipsoidal bulging of rolled sheet, 508
Diffuse necking
limit strains in the sheet metals by using the new Hill's yield criterion (1993), 429
Diffusion
carbothermal reduction and nitridation of silica: nuclei planar growth controlled by silicon monoxide diffusion on the reducer surface, 112

Dimensional accuracy
dimensional accuracy and cost optimisation in the finish machining of cold formed parts, 335
Distortion prediction method
finite-element prediction of distortion during gas metal arc welding using the shrinkage volume approach, 405
Dominant variables
the use and misuse of statistical tools, 288
Drilling
temperature effects in the drilling of human and bovine bone, 302
DSC
characterization of mechanically alloyed Fe–Cr–Sn alloys, 395
the preparation of the single-phase perovskite $LaNiO_3$, 91
DTA
transient liquid phase sintering of Fe–Cu–Ti compacts, 21
Dual-phase steels
design of process parameters for dual phase steel production with strip rolling using the finite-element method, 486
Ductile damage
inertia effects on the prediction of ductile damage, 474
Ductile fracture criterion
prediction of forming limit in bore-expanding of sheet metals using ductile fracture criterion, 433
Ductile interlayers
the influence of ductile interlayers on the mechanical performance of tungsten nitride coatings, 156
Dynamic analysis
finite element modelling of shot-peening residual stresses, 401
Dynamic
inertia effects on the prediction of ductile damage, 474

ECR plasma
measurements of ECR silane plasma parameters, 230
EDT
hard chromium plating of EDT mill work rolls, 281
Elastic modulus
changes in porosity and young's modulus due to sintering of plasma sprayed thermal barrier coatings, 217
Electrical discharge machining (EDM)
arc sawing of nickel based superalloys in aqueous electrolytes, 274
Electrical discharge machining
combined ultrasonic and electrical discharge machining of ceramic coated nickel alloy, 323
Electrical discharge sawing (EDS)
arc sawing of nickel based superalloys in aqueous electrolytes, 274
Electrical discharge texturing
hard chromium plating of EDT mill work rolls, 281
Electrochemical study
structure and reaction with lithium of tetragonal pyrochlore-like compound $Sm_2Ti_2O_7$, 529
Elliptical bulging
pole instability theory for ellipsoidal bulging of rolled sheet, 508
End mills
a study of coatings for end mills in high speed metal cutting, 251
Erosion resistance
relationship between erosion resistance and the phase and chemical composition of PVD coatings deposited onto high-speed steel, 184
Eu-doped material
the magnetic and structural properties of a series of lanthanum based transition metal perovskites, 118

Failure modes
the effect of the addition of Al and Si on the physical and mechanical properties of titanium nitride, 169
Failure prediction
application of Weibull statistics to the failure of coatings, 257
Failure probability analysis
failure probability analysis for a RBSN cylinder with a SiC coating subjected to a radial heat flux, 388
Fe–Cr–Sn
characterization of mechanically alloyed Fe–Cr–Sn alloys, 395
Fe-doped material
the magnetic and structural properties of a series of lanthanum based transition metal perovskites, 118
FEM
design of process parameters for dual phase steel production with strip rolling using the finite-element method, 486
prediction of forming limit in bore-expanding of sheet metals using ductile fracture criterion, 433
the reasons for structural defects arising in forgings of aluminium alloys analysed using the finite element method, 50
Fine turning
interaction of the technological history of a workpiece material and the machining parameters on the desired quality of the surface roughness of a product, 381
Finish machining
dimensional accuracy and cost optimisation in the finish machining of cold formed parts, 335
Finite element method
finite element simulation of bulge forming of an elbow of box section from circular tube, 410
Finite element
inertia effects on the prediction of ductile damage, 474
finite element modelling of shot-peening residual stresses, 401
elasto-plastic finite-element analysis of the cold expansion of adjacent fastener holes, 424
Finite-difference method
simulation of deformation and temperature in multi-pass three-roll rolling, 450
Finite-Element Method (FEM)
thermo-mechanical simulation of a rolling process with an FEM approach, 494
Finite-element method
finite-element prediction of distortion during gas metal arc welding using the shrinkage volume approach, 405
numerical simulation of failure prediction for ceramic tools: comparison with forging test results, 502
simulation of deformation and temperature in multi-pass three-roll rolling, 450
Flow visualisation
flow patterns in twin-screw extruders, 309
Food processing
controlling of overfilling in food processing, 360
Forging
a new shape complexity factor, 439
numerical simulation of failure prediction for ceramic tools: comparison with forging test results, 502
the reasons for structural defects arising in forgings of aluminium alloys analysed using the finite element method, 50
Forming limit diagram
limit strains in the sheet metals by using the new Hill's yield criterion (1993), 429
pole instability theory for ellipsoidal bulging of rolled sheet, 508
numerical determination of forming limit diagrams of orthotropic sheets using the '3G' theory of plasticity, 419
Forming limit
prediction of forming limit in bore-expanding of sheet metals using ductile fracture criterion, 433
Foundry
solidification process and characterisation of a mass–gravity foundry ingot, 71

Fracture prediction
numerical simulation of failure prediction for ceramic tools: comparison with forging test results, 502
Friction coefficient
strengthening of hardmetal inserts for cutting tools through heat treatment and surface modifications (PVD, CVD coatings), 355
Friction
on the deep drawing of cups with punch and blank-holding forces proportional to a hydraulic pressure, 375
Fuzzy logic
controlling of overfilling in food processing, 360
Fuzzy rules
a DC motor based cutting tool condition monitoring system, 350

Gas turbine
directions of the development of thermal barrier coatings in energy applications, 195
Genetic algorithm
a DC motor based cutting tool condition monitoring system, 350
Giant magneto-resistance
giant magneto-resistive granular films grown by laser ablation, 534
Glass fibres
microstructural and wettability study of surface pretreated glass fibres, 129
GMA aluminium butt joints
the development of the welding procedures and fatigue of butt-welded structures of aluminium-AA5383, 60
Granular films
giant magneto-resistive granular films grown by laser ablation, 534
Grinding steel balls
new industrial technology for producing mill balls in a continuous-casting deformation complex, 316

Hard coating
influence of knife-surfaces modification with hard coatings on the peeling wood process, 264
Hard-chromium plating
hard chromium plating of EDT mill work rolls, 281
Hardenability
the modelling of hardenability using neural networks, 8
Hardmetals
processing and properties of nanophase ceramics, 77
Hardness
the modelling of hardenability using neural networks, 8
Heat of solidification
evaluation of the heat of solidification of cast irons from continuous cooling curves, 25
Heat treating
retrogression and re-ageing of 7075 aluminium alloy: microstructural characterization, 54
Heat treatment
strengthening of hardmetal inserts for cutting tools through heat treatment and surface modifications (PVD, CVD coatings), 355
High speed Ferries
the development of the welding procedures and fatigue of butt-welded structures of aluminium-AA5383, 60
High speed machining
temperature measurement when high speed machining hardened mould/die steel, 293
High speed milling
a study of coatings for end mills in high speed metal cutting, 251
High strain rates
high strain rate effects on the strain of alloy steels, 481
High-speed steel
high-speed steels: increasing wear resistance by adding ceramic particles, 15
relationship between erosion resistance and the phase and chemical composition of PVD coatings deposited onto high-speed steel, 184
Hill's 1993 yield criterion
limit strains in the sheet metals by using the new Hill's yield criterion (1993), 429
Horizontal continuous casting
new industrial technology for producing mill balls in a continuous-casting deformation complex, 316
HVOF repair
component repair using HVOF thermal spraying, 203
HVOF
component repair using HVOF thermal spraying, 203

Indentation fracture toughness
strengthening of hardmetal inserts for cutting tools through heat treatment and surface modifications (PVD, CVD coatings), 355
Interfaces
atomistic modelling of interfacial bonding at metal/polymer interface, 147
Ion-sensitive probe
measurements of ECR silane plasma parameters, 230
Iron-zirconium-boron
preparation of Fe–Zr–B amorphous alloys by chemical reduction, 525

Jominy curve
the modelling of hardenability using neural networks, 8

Langmuir probe
measurements of ECR silane plasma parameters, 230
$LaNiO_3$
the preparation of the single-phase perovskite $LaNiO_3$, 91
Laser ablation
giant magneto-resistive granular films grown by laser ablation, 534
Life-time prediction
directions of the development of thermal barrier coatings in energy applications, 195
Limit strains
limit strains in the sheet metals by using the new Hill's yield criterion (1993), 429
Lithium intercalation
structure and reaction with lithium of tetragonal pyrochlore-like compound $Sm_2Ti_2O_7$, 529

Mössbauer spectroscopy
the magnetic and structural properties of a series of lanthanum based transition metal perovskites, 118
Mössbauer
characterization of mechanically alloyed Fe–Cr–Sn alloys, 395
Machining
an applied database system for the optimization of cutting conditions and tool selection, 371
machining optimisation in carbon fibre reinforced composite materials, 135
Mass–gravity
solidification process and characterisation of a mass–gravity foundry ingot, 71
Mathematical modelling
numerical simulation of the cross wedge rolling process including upsetting, 468
study of the process stability of cross wedge rolling, 458
Mechanical alloying
characterization of mechanically alloyed Fe–Cr–Sn alloys, 395
Mechanical properties
high-speed steels: increasing wear resistance by adding ceramic particles, 15

the effect of brazing temperature on the titanium/glass-ceramic bonding, 102
Mechanical
thermo-mechanical simulation of a rolling process with an FEM approach, 494
Melting
the use and misuse of statistical tools, 288
Mercury porosimetry
changes in porosity and young's modulus due to sintering of plasma sprayed thermal barrier coatings, 217
Metal forming
numerical simulation of the cross wedge rolling process including upsetting, 468
study of the process stability of cross wedge rolling, 458
Metal matrix composites
metal matrix composites: production by the stir casting method, 1
wear behaviour of aluminum reinforced with nickel aluminide MMCs, 66
Metal oxide
the preparation of the single-phase perovskite $LaNiO_3$, 91
Metal/ceramic joining
the effect of brazing temperature on the titanium/glass-ceramic bonding, 102
Micro-indentation tests
changes in porosity and young's modulus due to sintering of plasma sprayed thermal barrier coatings, 217
Micro-Raman spectroscopy
analysis of residual stresses in thermal barrier coatings, 209
Microcrystalline silicon
temperature dependence of the first order Raman scattering in thin films of μc-Si:H, 235
Microstructure
high-speed steels: increasing wear resistance by adding ceramic particles, 15
the effect of brazing temperature on the titanium/glass-ceramic bonding, 102
retrogression and re-ageing of 7075 aluminium alloy: microstructural characterization, 54
Microwave interferometer
measurements of ECR silane plasma parameters, 230
Mill rolls
hard chromium plating of EDT mill work rolls, 281
Mixing
flow patterns in twin-screw extruders, 309
Model experiment
modelling and description of the near-net-shape forging of cylindrical spur gears, 444
Modelling
the modelling of hardenability using neural networks, 8
Monitoring system
a DC motor based cutting tool condition monitoring system, 350
Multi-head swaging
new industrial technology for producing mill balls in a continuous-casting deformation complex, 316
Multi-knife shearing
new industrial technology for producing mill balls in a continuous-casting deformation complex, 316
Multi-layers
mechanical characterisation of TiN/ZrN multi-layered coatings, 177
Multi-pass hot rolling
the thermal–mechanical and microstructural model for the FEM simulation of hot plate rolling, 463
Multilayers
the influence of ductile interlayers on the mechanical performance of tungsten nitride coatings, 156
Nanocrystalline germanium
structural, chemical and optical characterisation of Ge-doped SiO_2 glass films grown by magnetron rf-sputtering, 269
Nanophase
processing and properties of nanophase ceramics, 77
Natural fibre composite
mechanics of wetting systems of natural fibres with polymeric resin, 124
NdFeB magnets
protection of NdFeB magnets by ultra-thin sol–gel derived films, 518
Near-net-shape forging
modelling and description of the near-net-shape forging of cylindrical spur gears, 444
Near-Net-Shape technology
dimensional accuracy and cost optimisation in the finish machining of cold formed parts, 335
Necking deep drawing
numerical determination of forming limit diagrams of orthotropic sheets using the '3G' theory of plasticity, 419
Negative ion
measurements of ECR silane plasma parameters, 230
Neural network
the modelling of hardenability using neural networks, 8
Nickel alloys
arc sawing of nickel based superalloys in aqueous electrolytes, 274
Nickel
combined ultrasonic and electrical discharge machining of ceramic coated nickel alloy, 323
Nitrides
the effect of the addition of Al and Si on the physical and mechanical properties of titanium nitride, 169
Non-conventional machining
arc sawing of nickel based superalloys in aqueous electrolytes, 274
Nucleation
carbothermal reduction and nitridation of silica: nuclei planar growth controlled by silicon monoxide diffusion on the reducer surface, 112
Numerical analysis
simulation of deformation and temperature in multi-pass three-roll rolling, 450

Optical transmission
structural, chemical and optical characterisation of Ge-doped SiO_2 glass films grown by magnetron rf-sputtering, 269
Optimisation
machining optimisation in carbon fibre reinforced composite materials, 135
Optimised weld procedures
the development of the welding procedures and fatigue of butt-welded structures of aluminium-AA5383, 60
Optimizing
an applied database system for the optimization of cutting conditions and tool selection, 371
Orthopaedics
temperature effects in the drilling of human and bovine bone, 302
Orthotropic plasticity
pole instability theory for ellipsoidal bulging of rolled sheet, 508
Oxidation
the effect of the addition of Al and Si on the physical and mechanical properties of titanium nitride, 169
the influence of small additions of Ni, Ti and C on the oxidation behaviour of sputtered tungsten coatings, 162
Oxydizing
properties of the surface layers on titanium alloy and their biocompatibility in in vitro tests, 190

Paste extrusion
a comparison of paste rheology and extrudate strength with respect to binder formulation and forming technique, 141
Peak pressure
pole instability theory for ellipsoidal bulging of rolled sheet, 508
Peeling
influence of knife-surfaces modification with hard coatings on the peeling wood process, 264
Perovskite
the preparation of the single-phase perovskite $LaNiO_3$, 91
the magnetic and structural properties of a series of lanthanum based transition metal perovskites, 118
Phase diagram's modelling
relationship between the DTA peak and the phase diagram: symbiosis between a thermodynamic database and a DTA curve, 31
Phase migration
a comparison of paste rheology and extrudate strength with respect to binder formulation and forming technique, 141
Photothermal
thermal diffusivity measurements of vapour grown carbon fibre composites, using the optical beam deflection technique, 151
Plane strain
pole instability theory for ellipsoidal bulging of rolled sheet, 508
Plasma CVD
measurements of ECR silane plasma parameters, 230
Plasma nitriding
properties of the surface layers on titanium alloy and their biocompatibility in in vitro tests, 190
Plasma spraying
changes in porosity and young's modulus due to sintering of plasma sprayed thermal barrier coatings, 217
Plastic working
simulation of deformation and temperature in multi-pass three-roll rolling, 450
Plastic zone development
finite element modelling of shot-peening residual stresses, 401
Plasticity
numerical determination of forming limit diagrams of orthotropic sheets using the '3G' theory of plasticity, 419
Plasto-hydrodynamic
experimental results of high speed wire coating using a combined hydrodynamic unit, 224
Pole and rim failures
pole instability theory for ellipsoidal bulging of rolled sheet, 508
Polyacetylene
atomistic modelling of interfacial bonding at metal/polymer interface, 147
Porosity
changes in porosity and young's modulus due to sintering of plasma sprayed thermal barrier coatings, 217
Powder technology
optimization of the sintering process of raw material wastes, 97
Precipitation
the thermal–mechanical and microstructural model for the FEM simulation of hot plate rolling, 463
Preform design
modelling and description of the near-net-shape forging of cylindrical spur gears, 444
Pressure distribution
experimental results of high speed wire coating using a combined hydrodynamic unit, 224
Process planning
an applied database system for the optimization of cutting conditions and tool selection, 371
Processing
processing and properties of nanophase ceramics, 77
Pull-out
mechanics of wetting systems of natural fibres with polymeric resin, 124
Punch force
on the deep drawing of cups with punch and blank-holding forces proportional to a hydraulic pressure, 375
PVD and CVD coatings
strengthening of hardmetal inserts for cutting tools through heat treatment and surface modifications (PVD, CVD coatings), 355
PVD coatings
a study of coatings for end mills in high speed metal cutting, 251
PVD methods
influence of knife-surfaces modification with hard coatings on the peeling wood process, 264
PVD process
relationship between erosion resistance and the phase and chemical composition of PVD coatings deposited onto high-speed steel, 184
PXRD
the preparation of the single-phase perovskite $LaNiO_3$, 91
Pyrochlore
structure and reaction with lithium of tetragonal pyrochlore-like compound $Sm_2Ti_2O_7$, 529

Quantitative metallography
relationship between erosion resistance and the phase and chemical composition of PVD coatings deposited onto high-speed steel, 184
Quantum size effect
structural, chemical and optical characterisation of Ge-doped SiO_2 glass films grown by magnetron rf-sputtering, 269

Raman scattering
temperature dependence of the first order Raman scattering in thin films of μc-Si:H, 235
Raman spectroscopy
structural, chemical and optical characterisation of Ge-doped SiO_2 glass films grown by magnetron rf-sputtering, 269
Re-ageing
retrogression and re-ageing of 7075 aluminium alloy: microstructural characterization, 54
Reactive sintering
transient liquid phase sintering of Fe–Cu–Ti compacts, 21
Recrystallization
the thermal–mechanical and microstructural model for the FEM simulation of hot plate rolling, 463
Recycling
the recycling of metals by plastic deformation: an example of recycling of aluminium and its alloys chips, 35
Residual stress
finite element modelling of shot-peening residual stresses, 401
Residual stress
mechanical characterisation of TiN/ZrN multi-layered coatings, 177
simulation of the thermo-mechanical behavior and residual stresses in the spray coating process, 243
analysis of residual stresses in thermal barrier coatings, 209
elasto-plastic finite-element analysis of the cold expansion of adjacent fastener holes, 424
Response surface methodology
interaction of the technological history of a workpiece material and the machining parameters on the desired quality of the surface roughness of a product, 381
Retrogression
retrogression and re-ageing of 7075 aluminium alloy: microstructural characterization, 54

rf-sputtering
structural, chemical and optical characterisation of Ge-doped SiO_2 glass films grown by magnetron rf-sputtering, 269
Roll texturing
hard chromium plating of EDT mill work rolls, 281
Rolling
simulation of deformation and temperature in multi-pass three-roll rolling, 450
thermo-mechanical simulation of a rolling process with an FEM approach, 494
Rotationally symmetrical forging parts
a new shape complexity factor, 439
Roughness
mechanical characterisation of TiN/ZrN multi-layered coatings, 177
RTD
flow patterns in twin-screw extruders, 309

Segregations
solidification process and characterisation of a mass–gravity foundry ingot, 71
SEM
the preparation of the single-phase perovskite $LaNiO_3$, 91
Semi-solid alloys
thixo-forming of Al–Cu alloys, 42
Semi-solid processing
thixo-forming of Al–Cu alloys, 42
Semiconductors
synthesis of NiS_2 thin films
Electrical and optical properties, 239
Sensor
temperature effects in the drilling of human and bovine bone, 302
Shape complexity
a new shape complexity factor, 439
Sheet metal forming
prediction of forming limit in bore-expanding of sheet metals using ductile fracture criterion, 433
Sheet metal
pole instability theory for ellipsoidal bulging of rolled sheet, 508
Shot-peening
finite element modelling of shot-peening residual stresses, 401
Shrinkage volume approach
finite-element prediction of distortion during gas metal arc welding using the shrinkage volume approach, 405
SiC
processing and properties of nanophase ceramics, 77
Silicon nitride
carbothermal reduction and nitridation of silica: nuclei planar growth controlled by silicon monoxide diffusion on the reducer surface, 112
Simple distortion prediction strategy
finite-element prediction of distortion during gas metal arc welding using the shrinkage volume approach, 405
Simulation
finite element simulation of bulge forming of an elbow of box section from circular tube, 410
thermo-mechanical simulation of a rolling process with an FEM approach, 494
Single crystal X-ray diffraction
structure and reaction with lithium of tetragonal pyrochlore-like compound $Sm_2Ti_2O_7$, 529
Sintering
changes in porosity and young's modulus due to sintering of plasma sprayed thermal barrier coatings, 217
high-speed steels: increasing wear resistance by adding ceramic particles, 15
Sisal fibre
mechanics of wetting systems of natural fibres with polymeric resin, 124
Sol–gel derived films
protection of NdFeB magnets by ultra-thin sol–gel derived films, 518
Solid oxide fuel cell (SOFC)
properties of Ni/YSZ porous cermets for SOFC anode substrates prepared by tape casting and coat-mix® process, 107
Split Hopkinson bar
high strain rate effects on the strain of alloy steels, 481
Spray coating process
simulation of the thermo-mechanical behavior and residual stresses in the spray coating process, 243
Spur gear
modelling and description of the near-net-shape forging of cylindrical spur gears, 444
Sputtering
the influence of small additions of Ni, Ti and C on the oxidation behaviour of sputtered tungsten coatings, 162
Stability
study of the process stability of cross wedge rolling, 458
Stabilized zirconia
analysis of residual stresses in thermal barrier coatings, 209
Statistical process control
the use and misuse of statistical tools, 288
Steel
the modelling of hardenability using neural networks, 8
Stir casting
metal matrix composites: production by the stir casting method, 1
Strengthening
strengthening of hardmetal inserts for cutting tools through heat treatment and surface modifications (PVD, CVD coatings), 355
Superalloy
arc sawing of nickel based superalloys in aqueous electrolytes, 274
Surface layers
properties of the surface layers on titanium alloy and their biocompatibility in in vitro tests, 190
Surface roughness
interaction of the technological history of a workpiece material and the machining parameters on the desired quality of the surface roughness of a product, 381
Surface tension
microstructural and wettability study of surface pretreated glass fibres, 129
Surgery
temperature effects in the drilling of human and bovine bone, 302

Tandem rolling
design of process parameters for dual phase steel production with strip rolling using the finite-element method, 486
Temperature measurement
temperature measurement when high speed machining hardened mould/die steel, 293
Temperature
simulation of deformation and temperature in multi-pass three-roll rolling, 450
temperature effects in the drilling of human and bovine bone, 302
Tempered steel
interaction of the technological history of a workpiece material and the machining parameters on the desired quality of the surface roughness of a product, 381
Thermal analysis
transient liquid phase sintering of Fe–Cu–Ti compacts, 21
Thermal barrier coating
directions of the development of thermal barrier coatings in energy applications, 195
analysis of residual stresses in thermal barrier coatings, 209

changes in porosity and young's modulus due to sintering of plasma sprayed thermal barrier coatings, 217
Thermal diffusivity
thermal diffusivity measurements of vapour grown carbon fibre composites, using the optical beam deflection technique, 151
Thermal response
finite-element prediction of distortion during gas metal arc welding using the shrinkage volume approach, 405
Thermal spraying
component repair using HVOF thermal spraying, 203
Thermal stress analysis
analysis of residual stresses in thermal barrier coatings, 209
Thermal stresses
failure probability analysis for a RBSN cylinder with a SiC coating subjected to a radial heat flux, 388
Thermal
thermo-mechanical simulation of a rolling process with an FEM approach, 494
Thermo-mechanical behavior
simulation of the thermo-mechanical behavior and residual stresses in the spray coating process, 243
Thermocouple
temperature effects in the drilling of human and bovine bone, 302
Thin films
synthesis of NiS_2 thin films
Electrical and optical properties, 239
Thixo-forming
thixo-forming of Al–Cu alloys, 42
Ti(C,N) coatings
relationship between erosion resistance and the phase and chemical composition of PVD coatings deposited onto high-speed steel, 184
TiN coatings
relationship between erosion resistance and the phase and chemical composition of PVD coatings deposited onto high-speed steel, 184
Titanium alloy
properties of the surface layers on titanium alloy and their biocompatibility in in vitro tests, 190
tool wear characteristics in turning of titanium alloy Ti-6246, 329
Titanium carbide
high-speed steels: increasing wear resistance by adding ceramic particles, 15
Titanium nitride
high-speed steels: increasing wear resistance by adding ceramic particles, 15
Titanium
the effect of brazing temperature on the titanium/glass-ceramic bonding, 102
Tool life
tool wear characteristics in turning of titanium alloy Ti-6246, 329
Tool steel
temperature measurement when high speed machining hardened mould/die steel, 293
Tool wear
tool wear characteristics in turning of titanium alloy Ti-6246, 329
Transient liquid phase sintering
transient liquid phase sintering of Fe–Cu–Ti compacts, 21
Tungsten carbide
temperature measurement when high speed machining hardened mould/die steel, 293
Tungsten
the influence of small additions of Ni, Ti and C on the oxidation behaviour of sputtered tungsten coatings, 162
Turning
cutting force modeling using artificial neural networks, 342
Twin-screw extruders
flow patterns in twin-screw extruders, 309

Ultra-microhardness
mechanical characterisation of TiN/ZrN multi-layered coatings, 177
the influence of ductile interlayers on the mechanical performance of tungsten nitride coatings, 156
Ultrasonic machining
combined ultrasonic and electrical discharge machining of ceramic coated nickel alloy, 323
Ultrasound
controlling of overfilling in food processing, 360
Upper-bound method
numerical simulation of the cross wedge rolling process including upsetting, 468
Uranium alloys
solidification process and characterisation of a mass–gravity foundry ingot, 71

Vapour grown carbon fibres
thermal diffusivity measurements of vapour grown carbon fibre composites, using the optical beam deflection technique, 151

Wastes
optimization of the sintering process of raw material wastes, 97
Wear resistance
high-speed steels: increasing wear resistance by adding ceramic particles, 15
Wear resistant
influence of knife-surfaces modification with hard coatings on the peeling wood process, 264
Wear
wear behaviour of aluminum reinforced with nickel aluminide MMCs, 66
Weibull distribution
failure probability analysis for a RBSN cylinder with a SiC coating subjected to a radial heat flux, 388
Weibull statistics
application of Weilbull statistics to the failure of coatings, 257
Weld dressing
the development of the welding procedures and fatigue of butt-welded structures of aluminium-AA5383, 60
Welding distortion
finite-element prediction of distortion during gas metal arc welding using the shrinkage volume approach, 405
Wire coating
experimental results of high speed wire coating using a combined hydrodynamic unit, 224

XRD stress analysis
analysis of residual stresses in thermal barrier coatings, 209
XRD
mechanical characterisation of TiN/ZrN multi-layered coatings, 177

Y_2O_3-stabilized ZrO_2
changes in porosity and young's modulus due to sintering of plasma sprayed thermal barrier coatings, 217
Yield drop
high strain rate effects on the strain of alloy steels, 481

Zirconia
the role of Al_2O_3 impurities on the microstructure and properties of Y-TZP, 85
